RESEARCH INTERESTS

I am interested in a secure and efficient architecture of high-performance devices (such as GPU, NPU, CXL, and PIM).

My research objective is to design high-performance devices with security guarantees. To achieve this goal, my recent studies focus on 1) *hardware security* and 2) *performance improvement* of high-performance devices.

Hardware Security of High-performance Devices: As accelerators, CXL, and PIM are widely used in mission-critical tasks, the importance of security increases. Although I extended Trusted Execution Environment (TEE) to GPU, NPU, CXL, and a heterogeneous processor in previous studies, countless security weaknesses still remain. Therefore, I aim to increase the security level to resist unintended operations of high-performance devices.

Performance Improvement of High-performance Devices: Since machine learning requires speedy processing, I consider both hardware and software optimization to enhance parallelism or to eliminate unnecessary procedures. In my prior studies, I proposed a fine-grained scheduling algorithm in GPU and NPU to increase resource utilization. Beyond these optimizations, I target a further improvement as a future research direction.

From these two sub-goals, my objective is to combine a trusted system with a high-performance device design. It is expected to protect users from attackers in a reasonable latency.

PROFESSIONAL SERVICES

KAIST, Daejeon, Republic of Korea

Mar 2025 -

Postdoc, School of Computing

Advisor: Jaehyuk Huh

Artifact Evaluation Committee: ISCA 2025

EDUCATION

KAIST, Daejeon, Republic of Korea

Mar 2021 - Feb 2025

Ph.D. Student, School of Computing

Advisor: Jaehyuk Huh

KAIST, Daejeon, Republic of Korea

Mar 2019 - Feb 2021

Master of Science, School of Computing

Advisor: Jaehyuk Huh

Thesis: *Hardware Security Techniques for Trusted Machine Learning Accelerators*

Yonsei University, Seoul, Republic of Korea

Mar 2015 - Feb 2019

Bachelor of Science, Computer Science

PUBLICATIONS

RESEARCH EXPERIENCES

KAIST, Daejeon, Republic of Korea

Mar 2019 -

Ongoing Researches at CASYS (Computer Architecture and SYStem) Lab

Advisor: Jaehyuk Huh

High-performance Device Security

- Memory protection optimization for GPU: Common counters for duplicate counters (Published in **HPCA 2021**)
- Inter-processing unit communication protection optimization for multi-GPU: Dynamic OTP table management and batched MAC (Published in **HPCA 2024**)
- Trusted execution environment for NPU: Tensor-granularity counters (Published in **HPCA 2022**)
- Memory protection optimization for NPU: Partial memory protection (Published in **ICCD 2022**)
- Side-channel attack protection for NPU
- Dynamic secure-granularity management for heterogeneous processors: Multi-granular MAC and multi-granular integrity tree (Published in **ISCA 2025**)
- Memory protection and obfuscation for CXL: Sealing CXL module, flit encryption, dummy flit, and DRAM cache

partitioning (Published in **TACO 2025**)

- Memory virtualization for multi-tenant general-purpose PIM

High-performance Device Performance

- Multi-tenancy support for a multi-GPU system: Time and spatial sharing (Published in **USENIX ATC 2022**)
- Accurate multi-NPU simulation: Multi-NPU simulator attached with DRAMsim3 (Published in **IISWC 2023**)
- On-chip memory management for training NPU: Access order rearrangement (Published in **MICRO 2023**)

Yonsei University, Seoul, Republic of Korea

Sep 2017 - June 2018

Undergraduate Research Intern at ELC (Embedded systems Languages and Compilers) Lab

Advisor: Bernd Burgstaller

Parallelism

- Accelerating big-data streaming engine: Multi-thread and shared-memory
- Parallelization of SFA (Simultaneous Deterministic Finite Automata) construction: MPI and Huang's algorithm

RECOGNITION

KAIST, Daejeon, Republic of Korea

Outstanding Teaching Assistant Award - CS311 Computer Organization

Spring 2022, Fall 2019

Outstanding Teaching Assistant Award - CS230 System Programming

Fall 2023

Yonsei University, Seoul, Republic of Korea

Dean's List

Spring 2018, Spring 2015

Undergraduate Capstone Project Award (Third Place) - Project Leader

Spring 2018

Title: *Cloud SFA: Parallel Construction of Simultaneous Deterministic Finite Automata in Distributed System*

Samsung Electronics, Hwaseong, Republic of Korea

Best Paper Award (Third Place)

Summer 2022

Title: *TNPU: Supporting Trusted Execution with Tree-less Integrity Protection for Neural Processing Unit*

PARTICIPATION

uArch (in conjunction with **ISCA 2022**), New York City, United States of America

Student Panel

Life in Grad School

June 2022

SKILLS

Programming Languages

C, C++, Python

NPU Simulators

mNPUsim, SCALE-Sim, MAESTRO, Gemini

GPU Programming

CUDA, MPS

Multi-core CPU Programming

MPI, OpenMP

Machine Learning Frameworks

Pytorch, Tensorflow

TEACHING EXPERIENCES

KAIST, Daejeon, Republic of Korea

Teaching Assistant

CS230 System Programming

Fall 2023, Fall 2021

CS311 Computer Organization

Fall 2022, Spring 2022, Spring 2021, Fall 2019

CS211 Digital System and Lab

Spring 2019

KAIST Education Center, Daejeon, Republic of Korea

Mentor & Lecturer

Seocho AI College

Summer 2019, Summer 2021

Python for Beginners

Summer 2022, Summer 2021
